Handheld Microphone Update

Gain up (Beta version)

2018/5/28

Sony GM&O

社外秘

INTERNAL USE ONLY

Summary

■ Beta version function & limitation

DWX (DWM-02N)

- Gain up +18dB, and clipped at overload input.
- Gain up menu is in the hidden menu.
User can set ON/OFF from this menu.
- The hidden menu name is old in the beta version.
Item's name will be changed in the final.
Old name; RFI SUPPRESSER (this function is not used on DWM-02N)

UWP-D (UTX-M03)

- Gain up +18dB, and clipped at overload input.
- UTX-M03 cannot set ON/OFF from the menu in the beta version.
When the UTX programmed with the beta version, UTX will be always gained up.
If the user wants to set the normal gain, user needs to re-write the current ver.

DWM-02N

■ To update the beta version
